Summary

To obtain a front-end developer role in a forward-thinking company where I can combine my passion for design and programming to build intuitive interfaces and interactive experiences, while continuously enhancing my skills in emerging front-end technologies.

Skills

Expertise: HTML5, CSS, Bootstrap, JavaScript, React Js, Node Js, TailwindCss, React Bootstrap, React Query, Firebase, ES6, React Router

Comfortable: Express Js, MongoDB, Jwt

Familiar: TypeScript, Next Js, MaterialUi, Redux.

Tools: VS code, Github, Netlify, Figma, Chrome Dev Tools, vercel.

Projects

1. Used Car Shop (Used product resale website)- [Live link](#) - [Github Client](#) - [GitHub Server](#)

- It is a used car resale website. Users can sell and buy the product by paying on Stripe.
- There are multiple user roles such as admin, seller, and buyer routes. Admin can control seller and buyer roles. Sellers can add products for sale. Buyers can buy products or delete products.
- The website has a user authentication system.

Technologies used: React. js, React router, Node.js, TailwindCss, Firebase, MambaUI, MongoDB, JWT, React hot toast, Daisyui, Express.js.

2. Carpenter Service (Service review website) - [Live Link](#) - [Github Client](#) - [GitHub Server](#)

- Created an online service base site to provide different kinds of carpenter service and also implemented a user review section to add reviews.
- Every service has a details page where users can add reviews and see others' reviews on the page.
- Added user Authentication, delete services, delete a review, edit the review, and order the service.

Technologies used: React. js, React router, Node. js, TailwindCss, Firebase, MambaUI, MongoDB

3. EduMate (Online course website) - [Live Link](#) - [Github Client](#) - [Github server](#)

- Designed and implemented a free online course with a course details page and each course pdf.
- The user can see the course description and get a premium course in the checkout page route.
- The user can purchase the course. And firebase authentication implemented for a good user experience

Technologies: React.js, Firebase, React router, MongoDB, TailwindCSS, Node js, JWT
